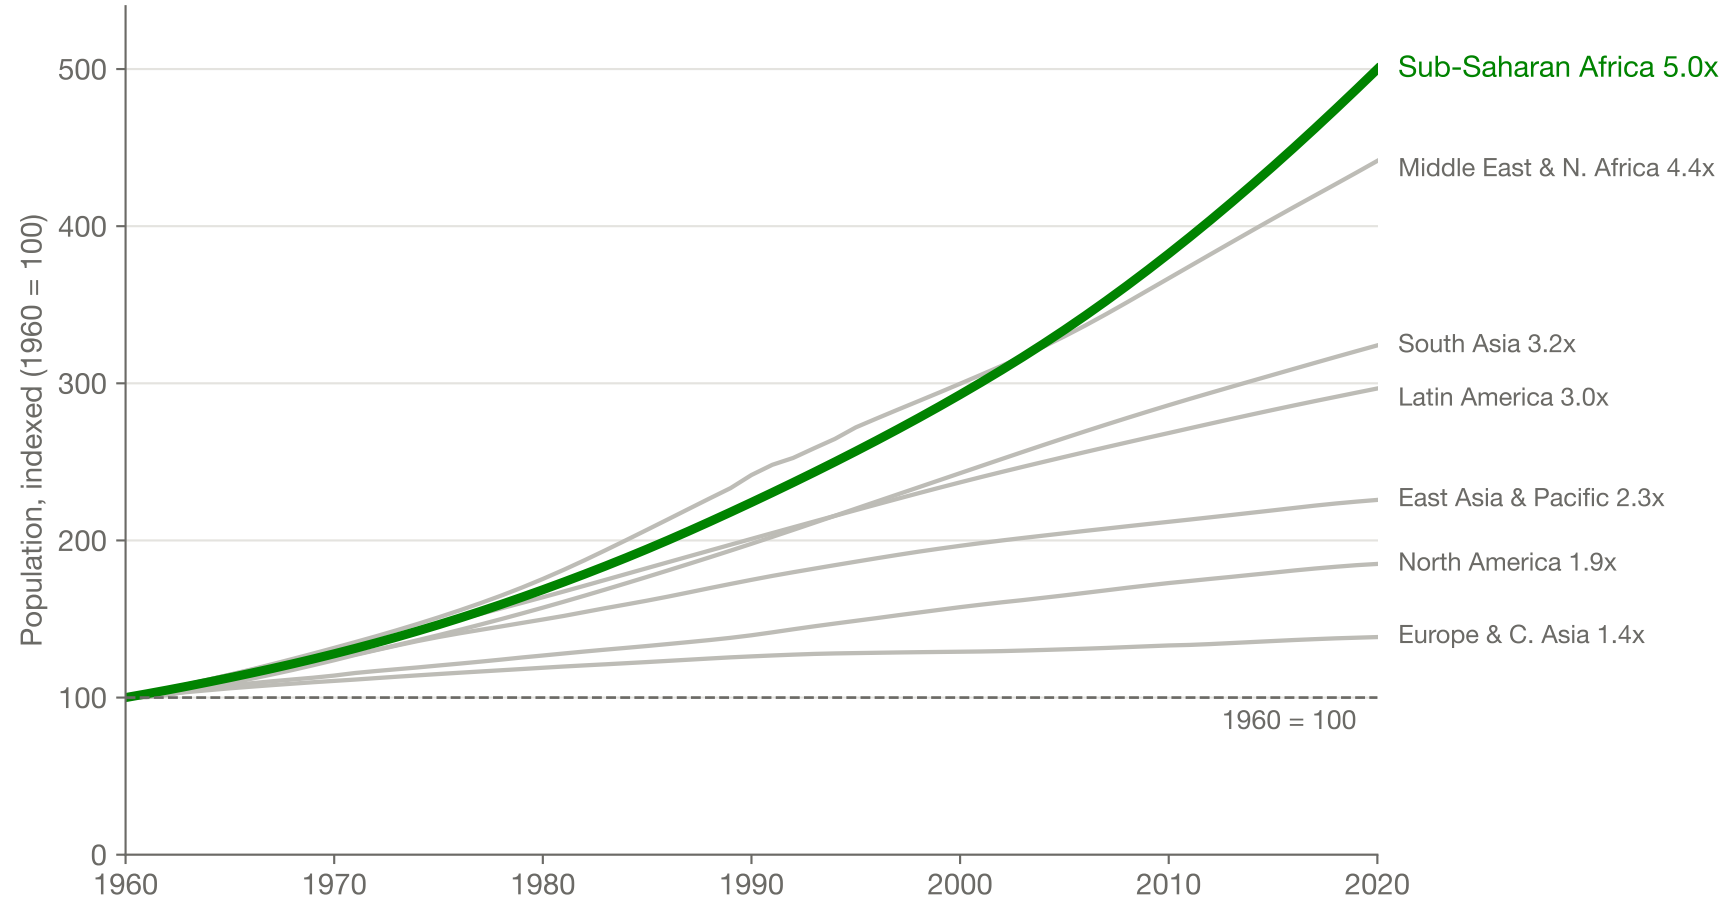
Africa Is the World's Future

No region on Earth is growing like Sub-Saharan Africa.

Sub-Saharan Africa's population has grown five-fold

Since 1960 it multiplied 5.0x - faster than any other region and more than double East Asia's 2.3x.



A growing share of the world's next generation is African

Sub-Saharan Africa's share soared from 16% to 24% in two decades, passing East Asia and closing on South Asia.

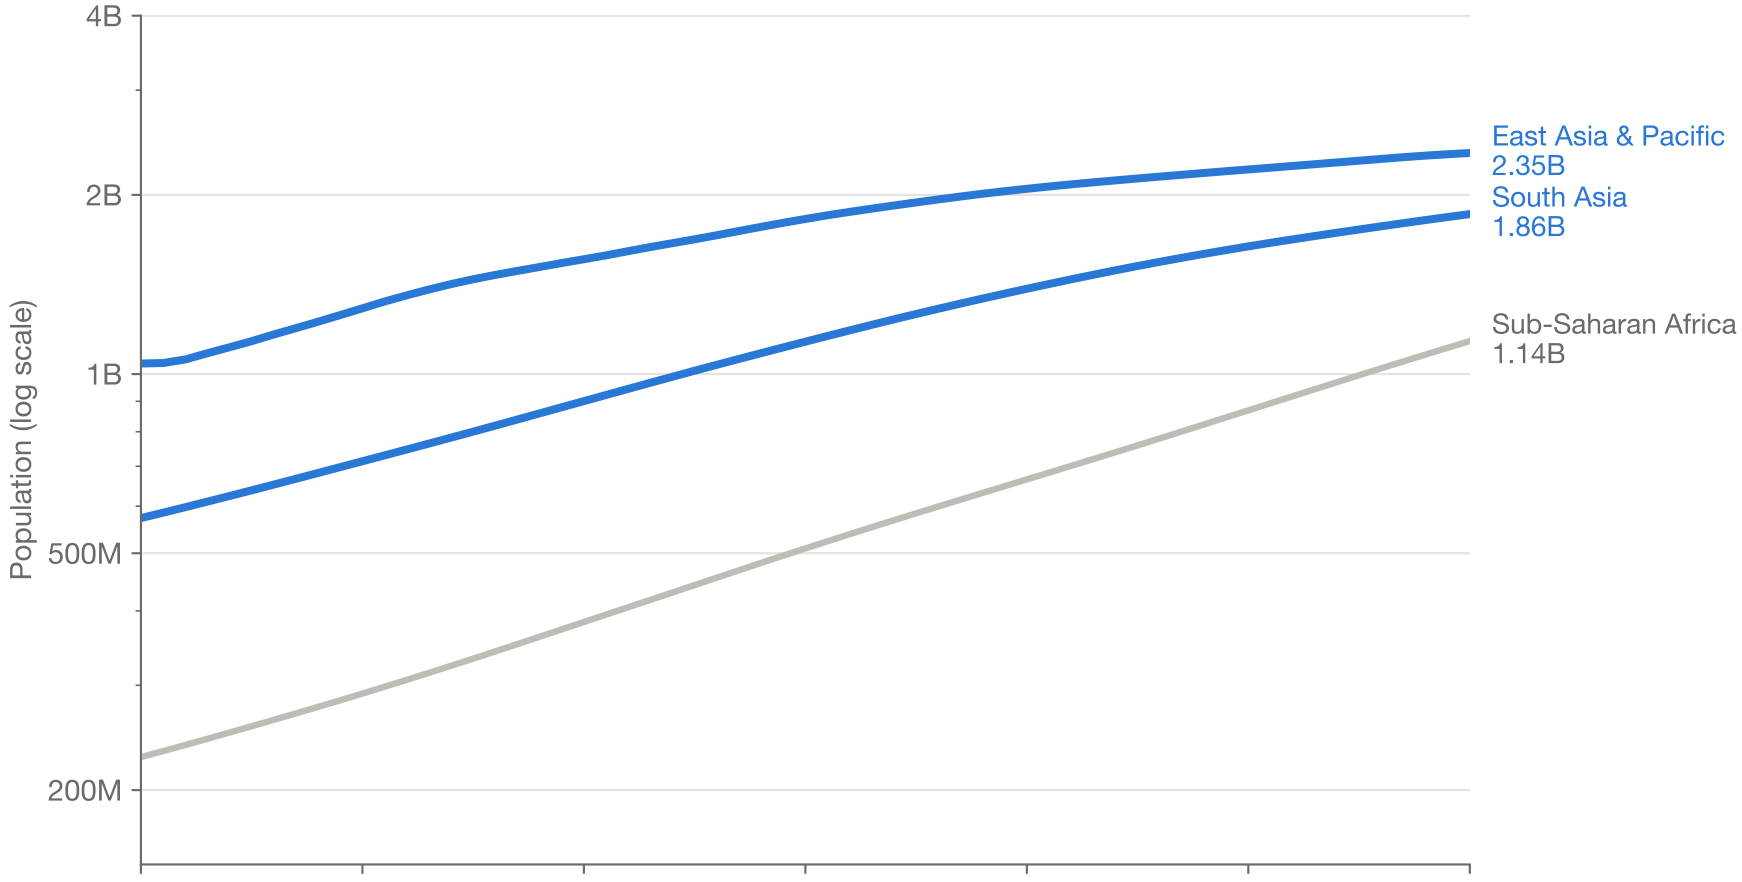
Africa's Boom Is Overstated

Sub-Saharan Africa is still far behind Asia - and its growth is already slowing.

Sub-Saharan Africa has never come close to Asia

In 60 years it never closed the gap: East and South Asia still have 3.1 billion more people.



Africa's growth rate is in steady decline

Growth has fallen every year since 2011. The boom has already peaked.
